DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to oligonucleotide primers and kits, classified in class 536, subclass 24.33.
 - II. Claims 5-9, drawn to a method for determining the number of repeat units of a microsatellite, classified in class 435, subclass 91.2.

Sequence Election Requirement Applicable to Both Groups

Each group detailed above reads on 21 patentably distinct groups, wherein each of the distinct groups is drawn to primers for the amplification of a different microsatellite. Applicants must further elect primers to a single microsatellite for examination with whichever claim set is elected. For whichever primer set is elected, applicant should identify which specific SEQ ID NO's as recited in claims 2, 4, 5, and 9 are related to the elected microsatellite. Two specific SEQ ID NO's will be examined, a forward primer and a reverse primer.

Prior to allowance, non-elected subject matter will be required to be deleted from any allowable claims.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product

as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products of invention I can be used in other methods, such as in nucleic acid purification methods and in aptamer methods.

3. With regard to the restriction between primers to individual microsatellite sequences, each sequence is patentably distinct because they are unrelated sequences, i.e. these sequences are unrelated because they do not share a common structure. These sequences themselves represent allelic variations which each have different diagnostic and therapeutic implications. A reference against one would not anticipate or obviate another.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-II require different searches that are not coextensive, examination of these claims would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

5. A telephone call was made to Janis Fraser on 1/17/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1655

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
